

Changed Pigmentation for FX 195

The FX 195 pigment was exchanged for the benefit of improved lamination values. The colour coordinates and the visual impression are nearly the same. Therefore, this improvement will be implemented immediately.

Colour deviation

Compared to the previous formula, the deviation of the dE-value is < 1 at full colour, and is thus within the existing tolerance. Visually, there is almost no difference. The formulations of special colours will be adjusted if necessary in order to comply with the tolerances.

For further information on Mara® Flex FX please refer to www.marabu-inks.com

Date of Change-Over

This change becomes effective starting with batch 810 (immediately). You will find an additional remark on the label stating:

„Attention: Modified Pigmentation“
