

Functional Decoration of Front Panels

Household appliances have become an integral part of our lives. Besides the technical achievements that make various everyday tasks easier for us, we also expect the appliances to reflect contemporary design preferences.

The panels of the appliances must not only meet design requirements, but also fulfil their original function: Enable the user to properly operate the device. So, the ink used for the decoration of the panels must be highly resistant to water, steam, and cleaning agents.

Mara® Panel MPA (designed to print on the common substrates PMMA or PC) meets these high requirements of direct printing and second surface. Customized colour shades and a non-conductive black make it possible to create any design.

Applications

- Decoration of front panels of appliances like washing machines, dryers, etc.

For further information please refer to the Technical Data Sheet on www.marabu-inks.com

Your Benefits:

Very high resistances

- Long-lasting products
- High-quality appearance

High Electrical Resistance Values

- Perfect functionality

Very High Opacity

- For best coverage

Mild Labelling

- User-friendly during processing

Customized Colour Shades

- Vast range of design possibilities
