

Improved Formulation starting with Batch 231

By replacing one raw material, we were able to improve the reactivity and gloss level of UVC 188.

This also allows the process stability to be further optimized.

Extensive test series have shown that, apart from the increase in reactivity and gloss, no other changes in the technical properties are to be expected.

For further information on Ultra Pack UVC please refer to the Technical Data Sheet on www.marabu-inks.com

Date of change-over

This change becomes effective starting with **batch 231** (immediately). You will find an additional remark on the label stating:

„Attention: Improved Formulation“
